SUMMARY

iOS developer trained at the Apple Developer Academy, where I shipped six applications end to end in Swift and SwiftUI. Built the CI/CD pipeline for automated testing and TestFlight distribution myself, cutting manual release overhead by 35%. Comfortable across the full cycle: architecture and design patterns, unit and integration testing, secure handling of sensitive user data, and supporting an app after release. Currently working in backend and cloud engineering, which makes me a stronger partner to the teams an iOS app depends on.

SKILLS

iOS: Swift, SwiftUI, UIKit, HealthKit, Xcode, TestFlight, App Store distribution

Architecture & Testing: MVVM and MVC, reusable component libraries, unit and integration testing, code review

CI/CD & Tooling: Xcode Cloud, GitHub Actions, Jenkins (self-hosted), Git, Postman

Backend & Data: Python, REST API integration, PostgreSQL, MySQL, Supabase, AWS Lambda

Ways of working: Agile delivery in short release cycles, cross-functional work with designers and testers

EXPERIENCE

Apple Developer Academy | Internship March 2025 – December 2025

iOS Developer

- Selected from 10,000+ applicants for a 10-month intensive iOS program; shipped 6 applications in Swift and SwiftUI from concept through App Store and TestFlight release.
- Built the CI/CD pipeline with Xcode Cloud for automated testing and TestFlight distribution, cutting manual release overhead by 35% and giving testers same-day builds.
- Applied MVVM architecture and built reusable component libraries shared across projects, keeping view logic testable and separated from UI.
- Wrote unit and integration tests and troubleshooted bugs through to release, catching issues before they reached testers.
- Worked in 2-week cycles with designers and testers, progressing from independent development to leading 4-person teams.

Dotcross AI December 2025 – Present

Junior AI Software Engineer

- Build and ship production backend services in Python on AWS, including REST and LLM API integration with structured output handling under strict accuracy constraints.
- Designed a monitoring system that instruments per-operation resource usage, driving an optimisation that cut per-case processing costs by 78% with zero quality regressions.
- Write and maintain the technical documentation other engineers use to deploy, extend and debug these services.

Sycomora Welfare Center July 2021 – December 2022

Technical Lead & UI Designer

- Directed technical delivery for a 5-person team, launching the company website and mobile app in 2-month cycles.

PROJECTS

Reflux – Health Companion App (live on TestFlight)

Swift, SwiftUI, HealthKit | testflight.apple.com/join/J77sp3K5

- Adaptive scheduling app generating personalised meal and medication timings from HealthKit sleep-wake data, with secure on-device handling of sensitive health information.
- Built with accessibility support throughout so the app works for users across a range of abilities.

EDUCATION

Bina Nusantara University — S.Kom. Information Systems (Applied ERP), GPA 3.42 / 4.00

2022 – 2026
